Mahoning River Ohio Environmental Dredging Project
Hanging Bag Test - Final Report

Dear Mr. Heidish,

We are pleased to submit four (4) copies of the Final Report for the Mahoning River Ohio Environmental Dredging Project Hanging Bag Test. This final copy addresses comments provided by you on February 17, 2004.

Attachment 1 includes the summary report of the hanging bag test prepared by our sub consultant testing laboratory, Geotechnics, Inc. This report includes the findings of the polymer bench test, observations during the hanging bag test and results of the geotechnical sediment testing.

Attachment 2 includes the results of analytical testing of water samples completed by our sub consultant testing laboratory, Severn Trent Laboratories, Inc. We have also provided a narrative and summary table for your use.

If you have any questions or require additional information, please contact me at (412) 922-5575.

Very truly yours
GANNETT FLEMING, INC.

Hanging Bag & Geotechnical Test Results
Mahoning River Ohio Environmental Dredging Project
U. S. Army Corps of Engineers, Pittsburgh District
Pittsburgh, Pennsylvania

Dear Mr. Kovacs,

Geotechnics has completed the Hanging Bag Test for the Mahoning River Project for the U. S. Army Corps of Engineers, Pittsburgh District. In general our Scope-of-Work included sample collection, sample preparation, polymer compatibility testing, the hanging bag test and selected geotechnical testing. The following information details the various tasks performed by Geotechnics. The geotechnical test results are discussed below and are attached.

Sample Collection

Geotechnics personnel traveled to the Mahoning River site located in Trumbull County, Warren Ohio on August 19, 2003 to collect river water and sediment samples. The sample was collected approximately 800 feet downstream of the Warren-Main Street Substation Dam at approximately River Mile 37 and was accessed from Main Avenue (County Highway 67). A total of Twelve 5-gallon buckets of river water and five 5-gallon buckets of river sediment were collected approximately 1-3 feet from the shoreline near the WCI Environmental Control Building-Outfall 061. The water sample was collected at the waters edge by submerging the buckets until they were filled. The river sediment was collected with a shovel at the rivers edge as well. Testing was conducted on these samples for the polymer bench test as well as the hanging bag test. During the bag test, the effluent water was collected for analytical testing. Upon correspondence with USACE personal, it was discovered that the samples were not collected in the desired area.

Consequently Geotechnics personnel traveled to the desired location on October 29, 2003 and collected river water and sediment samples from the rivers edge. The second sampling was collected upstream of the Girard-Liberty Street Dam near River Mile 27 as per scope of work. A total of fifteen (15) five-gallon buckets were utilized for sample containers for both the sediment and the water. Ten (10) water samples were collected at the waters edge by submerging the buckets until they were filled. The buckets, similar to five-gallon paint containers, were then sealed with snap type, clamping lids. The river sediment was collected at the same area by wading into the river and using a shovel to scoop the sediment from the river bottom. The collected sediment was placed in five (5) five-gallon buckets labeled (S1-S5) and then sealed. All of the samples were transported to our facility by truck. The following information pertains to the samples collected on October 29, 2003.

Initial Sample Preparation

The sediment sample was prepared by combining buckets 1, 2 and 3 together to have enough material to perform the hanging bag test. Initially, a water/sediment sample was prepared in a five-gallon bucket to be used for the polymer testing. The sediment was added to the river water to obtain a solid concentration that was between 130-150 grams per liter (g/L) as per the scope of work requirements. Once the material was placed in the bucket a mixer was utilized to mix the materials. Several samples were collected during the mixing from a sample port along the side of the bucket to verify the percent solids.

Polymer Testing

The polymer testing was conducted on river water and solids mixed in a five-gallon bucket simulating the potential dredged material from Mahoning River. Two products were selected from two manufacturers for the polymer testing. The first product was manufactured by Chemtall and distributed by Neo Solutions, Inc. located in Pittsburgh, Pennsylvania. The second product was manufactured by Cytec and distributed by Shereton Soft Water located in Buffalo, New York.

Several issues were considered when selecting the polymers. They included;

- **Product/ Treatment Toxicity** - Because Mahoning River is a public fishing location cationic type polymers were not seriously considered due to their high potential toxicity to fish. Cationic materials were not considered due to the negative reaction to fish gills which would most likely kill the fish. Only anionic products were tested for this phase. Anionic products are available in both powder or emulsion (liquid) forms. Both powders and emulsions must be mixed with water prior to being added to the dredged material. With the emulsion product (white liquid), surfactants are added to emulsify the product, which produces the liquid state.
- **Ease of Product Use** - The emulsions are the easiest materials to handle and can be added directly to the dredged material following mixing with water. The powders require approximately 30 minutes of preparation time (powder to water mixing) prior to being introduced into the dredged stream.
- **Rate of Dewatering** - The tests were conducted by treating the dredge stream with various dosages then pouring the material through a section of the geotube material (hanging bag) that was placed on the bottom of a funnel flask. The dewatering was observed and timed and the data is presented in a table below. The data obtained indicates the various products ability to drain the water through the bag material from the dredged material. However, it should be noted that this procedure allowed for dewatering to occur from below only, whereas, the actual hanging bag test will promote dewatering along its entire surface.
- **Water Clarity** - Turbidity tests were performed on all the samples that were passed through the bag material. In some cases a small amount of material passed through the bag, this was noted on our raw data results.

The initial testing was performed with the Neo Solutions emulsion #6450. Then Neo Solutions emulsions #6492 was tested followed by #6460. Various dosage rates were utilized to fine-tune the required amount of the polymer to be added. Two powder products, A-150 & A-130 from Shereton Soft Water were then tested. Two other Neo Solutions powder products #6955 & #6970 were tested to compare with the emulsions of similar charge and dosage. In general, the polymer test results indicate that the Neo Solutions, Inc. product #6460 applied at 60 ppm allows the dredge material to flow through the bag the fastest while the filtrate indicates the lowest turbidity of 93.9 Nephelometric Turbidity Units (NTU). See table 1.

The Hanging Bag Test

The Hanging Bag test was performed on the sample collected from behind the Girard-Liberty Street Dam on October 29, 2003 and was generally performed to the method presented in the Miratech video. The following information details the test procedure that was performed;

- A water/sediment sample was prepared and placed in the 55-gallon drum for testing. The required water/sediment ratio was determined by mathematically converting the water volume of 40 gallons to liters and then adding the appropriate soil based on dry weight to achieve the required concentration. Once the materials were placed into the drum the sample was mixed with an industrial mixer. As the material was being mixed the bottom of the drum was sounded with a metal rod to verify that all of the material was in solution. Two samples were collected during the mixing and percent solids were performed. The test results indicated the

solid concentrations were 139.0 and 144.6 g/L, which fell within the required range of 130-150 g/L. The test results are attached.

- The polymer was mixed in a five-gallon bucket prior to mixing with the water/sediment sample in the drum. The polymer was added to the drum in the appropriate ratio and allowed to mix with the water/sediment sample.
- The drum was suspended by forklift above the Hanging Bag as the mixing continued. At the appropriate time the 2" diameter valve was opened on the bottom of the drum and the material was allowed to flow into the bag.
- As the material flowed into the bag the water began to seep from the sides into the container below. The water was collected at predetermined time intervals and the total solids were determined as indicated below. The test results are attached.

Time	Total Solids
1 Minute	0.5
10 Minutes	0.3
60 Minutes	0.3
24 Hours	NA

- The bag was allowed to drain into the container for the time duration of 42 days. A small access window was cut into the bag after 1 day and a 1.5 inch diameter brass cylinder was pushed vertically into the top of the sample near the center portion of the soil. The brass cylinder was removed and a moisture content was performed. Moisture contents tests were also performed at 7, 14, 21, 28, 35 and 42 days. In general the initial moisture content was 64.35 percent dropping to 24.7 percent at the conclusion of the test. The test results are attached.
- The initial water/sediment volume was 40 gallons. Over the duration of the hanging bag test a total of 32.56 gallons of effluent water was returned to the bottom container. The return water was collected and weighed for a period of 1 day, after which, the flow from the bag was too small to measure.
- The entire sample was removed from the bag after 42 days. The bag was cut along the sides which allowed us to view the settled layers of the soil. As expected, the coarser materials had settled at the bottom of the bag. An additional observation was that the soil adjacent the sides of the bag were very dry.
- After the soil was removed from the bag, the entire sample was mixed in a pan, which included the center portion along with the drier side material.

Geotechnical Testing

The geotechnical testing program consisted of a sieve analysis, Atterberg Limit and a Standard Proctor. The sieve analysis results indicated that 100 percent passed the $\frac{3}{4}$ inch sieve and 65.21 percent passed the #200 sieve. The Atterberg Limit results showed a USCS Classification of MH (elastic silt) with a liquid limit of 59 percent, a plastic limit of 38 percent and a plasticity index of 21 percent. The Standard Proctor indicated an optimum moisture content of 24.5 percent and a maximum dry density of 89.2pcf. All of the above referenced test results are attached.

The following table summarizes the test results and the data sheets are attached.

Test	Result
Sieve Analysis % passing $\frac{3}{4}$ inches % passing #10 sieve % passing #200 sieve Classification USCS Classification	100.0 88.91 65.21 Brown Sandy Elastic Silt MH
Atterberg Limit (test performed on -40 material)	Liquid Limit – 59% Plastic Limit – 38% Plasticity Index – 21% USCS Symbol - MH
Standard Proctor Optimum Moisture Maximum Density	24.5% 89.2 pcf

Summary

Geotechnics performed the Hanging Bag test on a river sediment sample that was collected on October 29, 2003 in general accordance with the Miratech video that was reviewed prior to the testing. Two polymer sources were utilized to identify the best suited additive that would allow the soil to settle in the bag and the water to flow through the bag with minimal solids. A water/sediment sample was prepared and placed into a drum for mixing with the polymer. The drum was then raised above the hanging bag and the sample was discharged into the bag. The bag was allowed to drain over a period of 42 days with samples being collected on a weekly basis for moisture contents. At the end of the 42 days the sample was removed from the bag and a standard proctor test was performed.

During the test, photographs were taken at various time intervals and are attached. If you require additional information or clarification, please call.

Sincerely Yours,
Geotechnics, Inc.

Randy O'Rourke
President

Mahoning River Ohio Environmental Dredging Project
Hanging Bag Test

Summary Narrative of Analytical Testing Results

Testing was completed in accordance with the scope of work for samples collected from the hanging bag effluent. Attached are the results as provided by Severn Trent Laboratories, Inc. and a summary table of the results as compared with Ohio and EPA Maximum Concentration Levels (MCLs). Two sets of analytical test were performed corresponding to sediment samples collected on August 19, 2003 and October 29, 2003. Please note that although the laboratory refers to the samples as "River Water" for the October 29th samples, all analysis was completed on water obtained from the effluent of the hanging bag test not directly from the river. The hanging bag test was conducted by mixing river sediment to a prescribed ratio with river water and introducing a polymer to promote flocculation. The August 19th samples were prepared with Neo Solutions polymer product #6460 at a concentration of 30 ppm, while the October 29th samples were prepared using the same product but at 60 ppm based on the results of the polymer bench test as described in Attachment 1.

Based on our review of the test results in comparison to US and Ohio EPA Maximum Concentration Level (MCL) criteria, only a few tests revealed concentrations above the acceptance limits. Aluminum and Iron tested higher than the MCLs for the August 19th samples and Manganese tested higher than the MCL for both water samples.

Notes

- * Dash (--) indicates no available criteria for comparison
- * Bold (and red) values indicate exceedance of applicable criteria
- * The criteria for aluminum and iron are Secondary Criteria, and therefore are non-enforceable.
- * The data flag "B" indicates an estimated result since it is less than the reporting limit
- * The data flag "J" indicates that the associated method blank contains the target analyte at a reportable limit and may have caused contamination.

NELAC REPORTING:

The format and content of the attached report meets NELAC standards and guidelines except as noted in the narrative. The table below presents a summary of the certifications held by STL Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is New York State DOH. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	STL Pittsburgh
NFESC	NA	NAVY	X
USACE	(#S-46425)	Foreign Soil Import Permit	X
US Dept of Agriculture	(#S-46425)	WW	X
Arkansas – nelac	(#B-10350)	WW	X
Connecticut	(#PH-0688)	WW HW	X X
Florida – nelac	(#B-3660)	WW	X
Illinois – nelac	(#200005)	WW HW	X X
Kansas – nelac	(#B-10350)	WW HW	X X
Louisiana – nelac	(#93200)	WW HW	X X
New Hampshire – nelac	(#200002)	WW	X
New Jersey – nelac	(PA-005)	WW HW	X X
New York – nelac	(#11182)	WW HW	X X
North Carolina	(#434)	WW HW	X X
Ohio – Vap	(#C15006)	WW HW	X X
South Carolina	(#89014001)	WW HW	X X
Utah – nelac	(STLP)	WW HW	X X
West Virginia	(#142)	WW HW	X X
Wisconsin	998027800	WW HW	X X

The codes utilized for program types are described below:

HW Hazardous Waste certification

WW Non-potable Water and/or Wastewater certification

X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

CASE NARRATIVE

Gannett Fleming

STL Lot # C3J110152

Sample Receiving:

STL Pittsburgh received samples for analysis on October 10, 2003. The cooler was received within the proper temperature range.

Project specific QC was not required for samples contained in this report. Where batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:

The initial calibration analyzed had compounds outside the 15%RSD criteria. The average %RSD of all the compounds in the five-point calibration mix was less than 15%. Therefore, the average response factor was used for all compounds. See the following sheets for the compounds and the %RSDs.

The continuing calibration analyzed had compounds outside the $\pm 15\%$ D criteria. The average %D of all the compounds in the continuing calibration mix was less than 15%. Therefore, analysis continued and the results for the samples reported. See the following sheets for the compounds and the %Ds.

GC/MS Semivolatiles:

The reporting limits were adjusted due to the amount of sample used in the extraction procedure.

The initial calibration(s) analyzed had compounds outside the 15%RSD criteria. The average %RSD of all the compounds in the five-point calibration mix was less than 15%. Therefore, the average response factor was used for all compounds. See the following sheets for the compounds and the %RSDs.

The continuing calibration(s) analyzed had compounds outside the $\pm 15\%$ D criteria. The average %D of all the compounds in the continuing calibration mix was less than 15%. Therefore, analysis continued and the results for the samples reported. See the following sheets for the compounds and the %Ds.

Pesticides:

The reporting limits were adjusted due to the amount of sample used in the extraction procedure.

The continuing calibrations analyzed had compounds outside the $\pm 15\%$ D criteria. The average %D of all the compounds in the continuing calibration mix was less than 15%. Therefore, analysis continued and the results for the samples reported. See the following sheets for the compounds and the %Ds.

CASE NARRATIVE

Gannett Fleming

STL Lot # C3J110152

PCBs:

The reporting limits were adjusted due to the amount of sample used in the extraction procedure.

The continuing calibration analyzed had compounds outside the $\pm 15\%$ D criteria. The average %D of all the compounds in the continuing calibration mix was less than 15%. Therefore, analysis continued and the results for the samples reported. See the following sheets for the compounds and the %Ds.

Herbicides:

The reporting limits were adjusted due to the amount of sample used in the extraction procedure.

The initial calibration analyzed had compounds outside the 15%RSD criteria. The average %RSD of all the compounds in the five-point calibration mix was less than 15%. Therefore, the average response factor was used for all compounds. See the following sheets for the compounds and the %RSDs.

The continuing calibration analyzed had compounds outside the $\pm 15\%$ D criteria. The average %D of all the compounds in the continuing calibration mix was less than 15%. Therefore, analysis continued and the results for the samples reported. See the following sheets for the compounds and the %Ds.

Metals:

The matrix spike and matrix spike duplicate were outside control limits for aluminum.

The matrix spike duplicate was outside control limits for iron.

General Chemistry:

The reporting limit for TPH was adjusted due to the amount of sample used in the extraction procedure.

F2C9V	001	RIVER WATER	10/08/03	15:35

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

October 10, 2003

Carrie L. Gamber
Severn Trent laboratories
450 William Pitt Way
Pittsburgh, PA 15238

Dear Carrie:

Geotechnics is sending one sample of river water to be tested per STL's analytical testing record and the Army Corps of Engineers specification sheet, enclosed. Sampling took place on October 8, 2003 around 3:00 PM.

Sincerely,
GEOTECHNICS, Inc.

Larry Wetzel
Project Coordinator

Received by
Deean Hall 10/10/03
1535

> ASTM D 4718, D698-91, Moisture Density Relationship - Day 42 only.

There will also be a treatability test performed on the effluent water collected. All analyses will be conducted by a USACE and State certified analytical laboratory, in accordance with designated methods and criteria. The following analyses are required: total recoverable petroleum hydrocarbons (TRPH) (USEPA Method 418.1); Target Analyte List Metals, including antimony, arsenic, beryllium, cadmium, chromium, copper, lead, nickel, selenium, silver, and zinc (SW-846 Method 6010B); mercury (SW-846 7470); volatile organic compounds (VOC) (SW-846 Method 8260); herbicides (SW-846 Method 8151); pesticides (SW-846 Method 8081); PCB's (SW-846 Method 8082); and Polyaromatic hydrocarbon (PAH) (SW-846 Method 8270). *What is Method 418.1 → 1645n ?*

Bart. Hm

All test samples shall be disposed of in accordance to applicable Local, State and Federal rules and regulations.

2.1.4 Task 4 Prepare Letter Report

The Letter Report shall include a general description of the samples, sampling and testing procedures, hanging bag test results and effluent water treatability test results. Representative electronic photographs of the test in progress shall be included.

3.0 DELIVERY SCHEDULE

The Contractor shall submit the following within the specified times:

- a. Within 7 calendar days after Notice to Proceed, submit one draft copy of the Project Specific Quality Control Plan and Letter Sampling Plan.
- b. Within 3 calendar days after the Corp's review comments on the QCP and Letter Sampling Plan are received, submit final plans.
- c. Within 7 calendar days after submission of final QCP and Letter Sampling Plan, begin sampling and testing.
- d. Within 30 days calendar days after the submission of final QCP and Letter Sampling Plan, submit four copies of the Draft Letter Report.
- e. Within 7 calendar days of comment resolution submit four paper copies of Final Letter Report and one electronic copy in Word format.

The time required by the Pittsburgh District to review submissions is anticipated to be within 14 calendar days.

5.0 INFORMATION FURNISHED BY THE GOVERNMENT

The following items will be supplied to the contractor by the Government and shall become the contractor's property:

December 26, 2003

**NELAC REPORTING:**

The format and content of the attached report meets NELAC standards and guidelines except as noted in the narrative. The table below presents a summary of the certifications held by STL Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is New York State DOH. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	STL Pittsburgh
NFESC	NA	NAVY	X
USACE	(NA)	Corps of Engineers	X
US Dept of Agriculture	(#S-46425)	Foreign Soil Import Permit	X
Arkansas	(#934024)	WW	X
Connecticut	(#PH-0688)	WW HW	X X
Florida - nelac	(#87600)	WW	X
Illinois - nelac	(#200005)	WW HW	X X
Kansas - nelac	(#E-10350)	WW HW	X X
Louisiana - nelac	(#93200)	WW HW	X X
New Hampshire - nelac	(#203002)	WW	X
New Jersey - nelac	(PA-005)	WW HW	X X
New York - nelac	(#11129)	WW HW	X X
North Carolina	(#434)	WW HW	X X
Ohio - VAP	(#C150063)	WW HW	X X
South Carolina	(#89014001)	WW HW	X X
Utah - nelac	(STLP)	WW HW	X X
West Virginia	(#142)	WW HW	X X
Wisconsin	9980278001	WW HW	X X

The codes utilized for program types are described below:

HW Hazardous Waste certification

WW Non-potable Water and/or Wastewater certification

X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

CASE NARRATIVE

Gannett Fleming

STL Lot # C3L040291

Sample Receiving:

STL Pittsburgh received samples for analysis on December 4, 2003. The cooler was received within the proper temperature range.

The laboratory received sample TRIP BLANK that was not listed on the chain of custody. The sample was logged in for VOA analysis.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use and average response factor curve if no visible improvement is accomplished using a quadratic curve. The curve plot is provided for any compound that required a "best-fit" evaluation. Please refer to the curve plot for any compound that required a "best-fit" evaluation.

The CCAL had the following compounds >25%: acetone 46.1%, 2-butanone 31.0% and 2-hexanone 29.4%. These %D's are all within the expected range for these compounds.

GC/MS Semivolatiles:

The reporting limits were adjusted due to the amount of sample used in the extraction procedure.

All non-CCC compounds that have >15% RSD were evaluated to see if a better curve could be drawn using a quadratic curve. All compounds <30% RSD will use and average response factor curve if no visible improvement is accomplished using a quadratic curve. The curve plot is provided for any compound that required a "best-fit" evaluation. Please refer to the curve plot for any compound that required a "best-fit" evaluation.

Pesticides:

The reporting limits were adjusted due to the amount of sample used in the extraction procedure.

The continuing calibration(s) analyzed had compounds outside the $\pm 15\%$ D criteria. The average %D of all the compounds in the continuing calibration mix was less than 15%. Therefore, analysis continued and the results for the samples reported. See the following sheets for the compounds and the %Ds.

PCBs:

The reporting limits were adjusted due to the amount of sample used in the extraction procedure.

CASE NARRATIVE

Gannett Fleming

STL Lot # C3L040291

Herbicides:

The reporting limits were adjusted due to the amount of sample used in the extraction procedure.

The continuing calibration(s) analyzed had compounds outside the $\pm 15\%$ D criteria. The average %D of all the compounds in the continuing calibration mix was less than 15%. Therefore, analysis continued and the results for the samples reported. See the following sheets for the compounds and the %Ds.

Metals:

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:

The reporting limit for TPH was adjusted due to the amount of sample used in the extraction procedure.

METHODS SUMMARY

C3L040291

<u>PARAMETER</u>	<u>ANALYTICAL METHOD</u>	<u>PREPARATION METHOD</u>
Chlorinated Herbicides by GC	SW846 8151A	SW846 8151A
Mercury in Liquid Waste (Manual Cold-Vapor)	SW846 7470A	SW846 7470A
N-Hexane Ext. Material, Silica Gel Treated-1664A	CFR136A 1664A S	EPA 1664A
Organochlorine Pesticides	SW846 8081A	SW846 3510C
PCBs by SW-846-8082	SW846 8082	SW846 3510C
Semivolatile Organic Compounds by GC/MS	SW846 8270C	SW846 3520C
Trace Inductively Coupled Plasma (ICP) Metals	SW846 6010B	SW846 3010A
Volatile Organics by GC/MS	SW846 8260B	SW846 5030

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

MATRIX SPIKE SAMPLE EVALUATION REPORT

TOTAL Metals

Client Lot #...: C3L040291
Date Sampled...: 12/04/03

Matrix.....: WATER

Date Received..: 12/04/03

PARAMETER	PERCENT RECOVERY	RECOVERY LIMITS	RPD	RPD LIMITS	METHOD	PREPARATION-	WORK
	RECOVERY	LIMITS	RPD	LIMITS	METHOD	ANALYSIS DATE	ORDER #
Zinc	94	(75 - 125)			SW846 6010B	12/10-12/15/03	F51511DG
	96	(75 - 125)	1.8	(0-20)	SW846 6010B	12/10-12/15/03	F51511DH

Dilution Factor: 1
Analysis Time.: 17:18
MS Run #.....: 3344027

NOTE(S) :

Calculations are performed before rounding to avoid round-off errors in calculated results.
